

MOUNTAINS TO SOUND GREENWAY TRUST

SEATTLE TO CLE ELUM, WASHINGTON

MOUNTAINS TO SOUND GREENWAY TRUST

The 120-mile Mountains to Sound Greenway courses through the Seattle metropolitan region—from the shores of Puget Sound, across Lake Washington, all the way to the ponderosa forests and prairies of eastern Washington.

BENEFITS

- Large-scale open space and scenic conservation
- Award-winning answer to balancing human development with a healthy natural environment
- Natural resource and habitat protection
- Breathing room for a growing metropolitan population
- Increased access to nature
- Unparalleled scenic beauty
- Regional trail system connecting Seattle to Eastern Washington
- Heritage tourism and recreation

It connects state parks, national forest areas, wilderness areas, the Cedar River Watershed, privately owned timber land, and municipalities—preserving multi-purpose scenic, working, and recreational landscapes for future generations.

Jones & Jones has collaborated with the Greenway Trust since 1993 on strategic and master planning, as well as on project planning and design with the Trust's various public and private partners. Distinctive projects balancing aesthetic, resource, and recreational interests of industry, environmental, and government leaders now dot the landscape of the Greenway corridor, which cradles I-90, the only interstate designated as a National Scenic Byway.

The Greenway will define our generation's bequest to the region—a place of incomparable beauty, history and outdoor recreation for our children and grandchildren.
